

# Guidelines for the deployment of the project

1. Open the .ipynb file in the project directory with jupyter notebooks.
2. Run the model with jupyter notebook.
3. To change the image directory move to the In[4], first line, variable 'fp' and change the directory according to you which should be of the desired image.
4. You get the output of the deNoised image on In[7].

## Notes:

1. The Sample screenshots are in the same directory.
2. The path for the predefined image is in the variable(It is in our local machine so it won't work for every machine). It needs to get changed for the required machine.
3. The libraries to be downloaded for this project are -

Tensorflow

Keras

Numpy

matplotlib

PIL

IPython

These libraries are first need to be downloaded then only the project will be deployed.
